

AN EXPERIENCED ANTENNA PARK LOOKING TO GROW

The **Puertollano Antenna Park** hosts Deimos' own and hosted ground stations. Built originally for Deimos-2 to host Deimos' **10.2-m main dish**, the Park now hosts 4 different antennas from various networks, managed and operated by **Deimos' dedicated staff**. The Park also has **40,000 m² of real estate** for further expansion.

The Park is located **alongside Deimos' main facilities**, which complement the Park's offering with mission control facilities and office space for on-site staff.

IDEAL LOCATION AND CAPABILITIES TO COMPLEMENT YOUR NETWORK

HOW IT WORKS	LEASE OUR ANTENNAS	BRING YOUR OWN ANTENNA
Antenna	10.2 m full motion	Your own
Frequency bands	S/X band (dual)	Your selection
End users	Your customers	
Relations with end users	You	
Handling and executing connections		You
Antenna availability	Shared	Exclusive
Antenna maintenance		
Securing spectrum rights		

ONLY COMMERCIAL GROUND STATION IN SPAIN AND PORTUGAL

Deimos' is the **only ground station available for commercial use** in Spain and Portugal. All other ground stations are owned by institutions (e.g., ESA, INTA) or operated exclusively by their owners (e.g., Hispasat). And you can **lease it now!**

IDEAL LOCATION

With its unique view from **south-western Europe**, our antenna park is ideally located for imaging of Europe and North Africa. Download data and free up memory right before an imaging pass or aim for near-real time imaging for North African / South European targets. Our location is also **complementary to polar stations** in Nordic countries, enabling near-real-time imaging with successive communication windows with target satellites.

UNDERUTILIZED SPECTRUM

Thanks to its relative isolation, **few satellites are licensed** for the available spectrum. We will take care of all your spectrum licensing needs for all your customers, in the **benign regulatory environment** of a country in the top 10 of satellite operators.

SPACE FOR GROWTH

We have more than **40,000 m² of space for additional antennas**, both on the ground and on our rooftop, with **dedicated, specialized staff** to support the installation and maintenance of new systems. We also have a **mission control room available** as well as office space for on-site staff, to support your most challenging missions.

Strengthen your network
with our antenna park.
